Saifallah Basem Ahmed

Software Testing Engineer

Email: saifallahbasem2@gmail.com **Phone number:** 01020458519 **LinkedIn:** www.linkedin.com/in/saifallah-basem

---

Summary

Software Testing / QA Engineer with a solid technical foundation in software testing principles, SDLC, and quality assurance concepts. Strong analytical thinking and high attention to detail, with the ability to understand software behavior from both user and technical perspectives, supported by a background in programming (Java, C++, Python) that enables effective defect analysis and clear communication with development teams.

Education **(2023–2027)**

B.Sc. of Computer & Systems Engineering
Ain Shams University

Internship Experience **(Nov 2025 – Jul 2026)**

Software Testing Engineer Intern – DEPI

- Gaining hands-on exposure to manual and automated testing, including test case creation, execution, and basic defect reporting within a training environment.
- Applying analytical thinking and problem-solving to understand requirements and identify software issues during practical exercises.
- Collaborating with instructors and peers, demonstrating effective communication and teamwork.
- Managing assigned tasks efficiently, showing adaptability and time management throughout the training program.

Certifications & Learning

- **ISTQB Foundation Level (CTFL)** – *Currently studying.*
- **Software Development Life Cycle (SDLC)** – *Studied (Waterfall & Agile overview)*
- **Cybersecurity & Digital Forensics** – ERI (Introductory training)

Technical Skills

- **Programming:** Java, C++, Python
- **Modeling & Simulation:** MATLAB, Simulink
- **Software Testing:** Software Testing Fundamentals, QA Concepts, SDLC
- **Parallel Programming:** Multithreading & Synchronization concepts
- **Core Concepts:** OOP, Digital Logic, Control Systems

Projects

Food Rescue Platform

- Developed a platform concept to connect food donors with charities to reduce food waste.
-Focused on system functionality, user roles, and basic workflow design.
- Applied object-oriented principles and problem-solving skills.

Vehicle Rental System

- Designed and implemented a vehicle rental management system.
-Features included vehicle availability tracking, user booking, and rental management.
-Strengthening skills in system design, logic implementation, and software structure.

Traffic Light Controller (Digital Logic Design Course)

- Designed and implemented a traffic light control system using digital logic circuits to manage signal timing and sequencing efficiently.
